Seeing the unseen with SMI

Experience color flow imaging with unmatched detail and definition on Aplio i600. Superb micro-vascular imaging (SMI) expands the range of visible blood flow to visualize low-velocity microvascular flow as never seen before with diagnostic ultrasound.

Conventional

SMI

Traditional color Doppler imaging (left) removes clutter from the images by suppressing low-velocity components, resulting in a loss of flow in tiny vessels. SMI (right) separates flow from overlaying tissue motion effectively, while preserving even the subtlest low-flow components with unmatched detail and definition.

SMI's level of vascular visualization, combined with high frame rates, advances diagnostic confidence when evaluating lesions, cysts and tumors.

Smart Sensor 3D allows you to acquire accurate 3D volumes with a standard linear or convex transducer, also in SMI mode.

Increase your confidence, expand your capability

Early detection and reliable characterization of lesions help optimizing your patients' clinical pathway. Aplio's extensive suite of advanced imaging and quantification functions can help you get definite answers quickly and with confidence.

Aplio's comprehensive CEUS imaging and quantification package allows you to assess perfusion dynamics in a wide range of clinical settings, including an ample variety of specialized exams.

Better intercostal access

Aplio's thin convex transducers are ideally suited for intercostal scanning. The new biopsy attachment with minimized blind area and selectable puncture angle facilitates optimal puncture conditions for each patient.

Our shear wave technology provides a quantitative measure and realtime display of tissue elasticity in a variety of clinical settings ranging from abdominal to small parts examinations.

Smart Maps help you visualize and quantify shear wave propagation in realtime. Aplio's unique propagation map is a powerful and intuitive tool to visually assess the quality of an elastogram.

The system's comprehensive strain elastography suite with raw data functionality assists you in localizing and assessing palpable masses with high accuracy, sensitivity and reproducibility.

Navigate with ease, treat with confidence

Aplio provides a wide range of tools for advanced imaging and interventions. Dedicated transducers and an abundance of imaging and navigation tools help you enhance confidence and accuracy during interventional procedures and their follow-up.

Merging modalities to improve visualization

On Aplio, merging two modalities for synchronized display is a simple and quick two-step process. Intelligent target and marker points facilitate navigation in the region of interest.

For comprehensive evaluation, Smart Fusion allows you to work in multiple imaging modes, including color Doppler and CEUS. The concise quad display shows the live ultrasound image in sync with multiple views of the pre-loaded data.

BEAM technology provides clearer visualization of biopsy needles in the live image. The function works with all common needle sizes and selects the optimal enhancement fully automatically.

Exceptional detail for a more precise diagnosis

Both the busy clinician and the patient can benefit from high-resolution imaging and volumetric ultrasound. Aplio's comprehensive volume imaging suite extends your diagnostic capabilities into the next dimension of imaging with extraordinary image quality and uncompromised workflow.

Advanced Dynamic Flow™ adds superior spatial resolution to color Doppler imaging to reveal minute flow patterns with unprecedented accuracy and detail. ADF provides high frame rates, while maintaining the full B-mode image quality.

Luminance offers natural-looking 3D renderings of high quality and definition, providing strong visual feedback on depth and detail from the first trimester onwards.

A wide range of MultiView options provide high-resolution cross sections, helping you to better understand anatomical relationships or the extent of a given lesion.

Accurate quantification, regional myocardial function

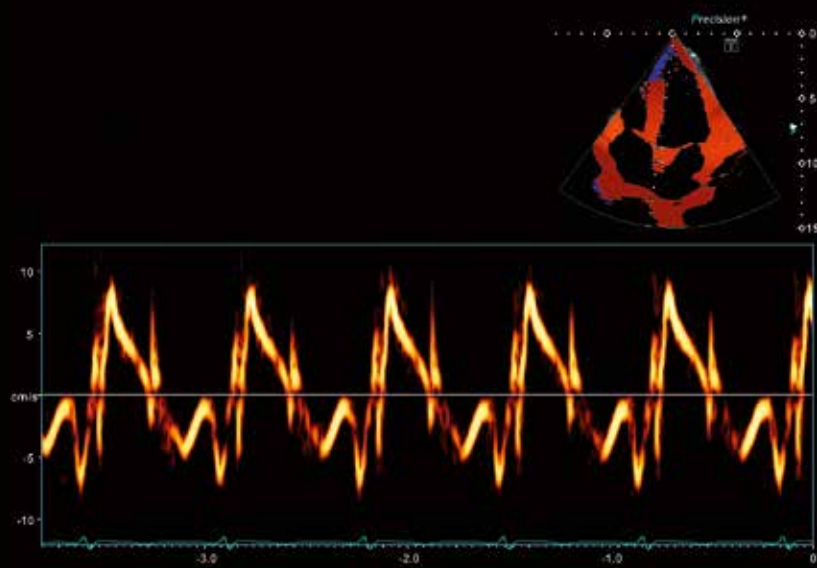

Functional assessment is at the heart of cardiovascular imaging. By providing valuable additional information in easy-to-understand visual, parametric or quantitative formats, Aplio's advanced clinical functions can help you get your diagnostic answer faster and more reliably.

Supporting standard and user-defined protocols for both physical and pharmacological stress, Aplio offers a comprehensive package for fast and accurate wall motion assessment.

Aplio's advanced Wall Motion Tracking technology provides immediate visual and quantitative access to global and regional myocardial wall motion dynamics.

Aplio provides you with high frame rate Tissue Doppler images and Pulsed-Wave-TDI traces for a precise timing of cardiac events in both visual and quantitative formats.

Flex-M allows you to derive anatomically correct M-mode traces from live or stored 2D images with the same quality as in conventional M-mode.

Consistent high-quality
results, outstanding
ergonomics

Vascular exams can be very challenging. Aplio i600's dedicated transducers ensure excellent imaging resolution and sensitivity for all vascular applications, while automated scan protocols and measurements help you improve efficiency and consistency.

Aplio's clinical protocol assistant provides a reliable method to ensure that complex exams are done consistently patient after patient. Once activated, a clear, easy-to-read menu will guide you step by step through the entire exam.

Aplio's Color Quick Scan helps you optimize steering, sample volume and angle correction by simply pressing a button during vascular examinations, while baseline and velocity range are automatically optimized when a Doppler waveform is displayed.

Go wireless to gain better access

Aplio i-series allows you to remotely operate the system from a wireless tablet. This can be particularly helpful during vascular exams where it can be difficult to scan a patient and reach the panel at the same time, without losing sight on the monitor.

Designed with our users in mind

Smaller and lighter, Aplio i600 is easy to maneuver. With over 36 cm panel height adjustment, lateral slide and a fully articulating monitor arm, Aplio i600 helps you to optimally adjust the console to virtually any scanning position.

Aplio makes your work flow

Aplio provides a host of intelligent workflow support and automation tools, helping you to achieve rapid results with consistent high quality regardless of the patient condition.

The mode-sensitive on-screen navigation for the central trackball boosts your workflow and efficiency. By visually guiding you through the exam, it allows you to adapt and operate the system within a few minutes.

Access all areas

Aplio's large, tablet-style touch screen with three interactive zones allows you to quickly browse and select the desired function, while the rest of the display remains unchanged.

Realtime QuickScan allows you to achieve greater consistency in your exams by ensuring that superb image quality is the benchmark.

Thanks to Aplio's embedded raw data functionality you can optimize, review, analyze and report your clinical data anytime with no loss of functionality.

A range of automated measurement and analysis tools help you increase accuracy, consistency and speed of your exams.
